Act 1: System Reconnaissance (Server ki identity check karna)

1. `whoami` — Pata karna ke abhi aap kis user account se logged in hain.
2. `id` — Current user ki ID, Group ID, aur permissions check karna.
3. `hostname` — Server ka network name dekhna.
4. `uname -a` — Linux kernel version aur system architecture check karna.
5. `uptime` — Server kab se chal raha hai aur kitna CPU load hai ye dekhna.
6. `date` — Current system date aur time display karna.
7. `cal` — Terminal par current month ka calendar dekhna.
8. `clear` — Screen ke tamam purane text ko saaf karna.
9. `history` — Hacker ya purane user ki chalayi gayi pichli commands ki list dekhna.
10. `exit` — Terminal session ko secure tareeqe se close ya logout karna.

Act 2: Investigating Directory & File Structure (Files ki talash)

11. `pwd` — Aap abhi system ke kis folder (path) me khade hain wo dekhna.
12. `ls` — Current folder ke andar tamam visible files aur folders ki list dekhna.
13. `ls -la` — Hidden files (`.`) aur unki full permissions/details dekhna.
14. `cd` — Ek folder se doosre folder me jaana.
15. `cd ..` — Ek step peeche (parent directory me) wapas aana.
16. `cd ~` — Direct apne user ke Home folder me aana.
17. `mkdir` — Naya folder (directory) banana.
18. `mkdir -p` — Ek sath nested folders (folder ke andar folder) banana.
19. `rmdir` — Khali (empty) folder ko delete karna.
20. `rm -r` — Kisi folder ko uske tamam contents ke sath khatam karna.

Act 3: Inspecting & Editing Suspicious Files (Log analysis)

21. `touch` — Ek khali (empty) file banana ya existing file ka timestamp update karna.
22. `cp` — Ek file ki copy doosri jagah banana.
23. `cp -r` — Poore folder ko copy karna.
24. `mv` — File ko move karna ya uska naam rename karna.
25. `rm` — Specific file ko delete karna.
26. `rm -f` — Bina kisi warning ke force delete karna.
27. `cat` — Choti file ka saara content screen par ek sath print karna.
28. `tac` — File ka content ulta (aakhri line se pehli line tak) dikhana.
29. `less` — Badi log files ko page-by-page aaram se scroll karke parhna.
30. `more` — Standard way me long file content scroll karna.
31. `head` — File ki shuruati 10 lines dekhna.
32. `tail` — File ki aakhri 10 lines dekhna.
33. `tail -f` — Live log file ko monitor karna (real-time changes dekhna).
34. `nano` — Terminal par easy text editor me file edit karna.
35. `vim` — Advanced modal editor me script ya config files edit karna.
36. `nl` — File content ko line numbers ke sath display karna.
37. `stat` — File ki detailed info (Access time, Modify time, Inode) check karna.

38. `file` — Detect karna ke file kis type ki hai (Binary, Text, Executable).
39. `wc` — File ke andar kul lines, words, aur characters count karna.
40. `diff` — Do files ke beech ka farq (differences) check karna.

Act 4: User & Access Privilege Lockdown (Security manage karna)

41. `chmod` — File ki Read, Write, Execute permissions change karna.
42. `chown` — File ka Owner change karna.
43. `chgrp` — File ka Group Ownership change karna.
44. `umask` — Nayi banne wali files ki default permissions set karna.
45. `sudo` — Temporary Root (Admin) power ke sath command chalana.
46. `su` — Doosre user ya direct Root account me switch ho jana.
47. `passwd` — Current ya kisi doosre user ka password change karna.
48. `useradd` — Network par naya user account create karna.
49. `usermod` — Existing user account ki settings ya groups modify karna.
50. `userdel` — Rogue ya suspicious user account ko delete karna.
51. `groupadd` — Naya user group banana.
52. `groupdel` — Purana group remove karna.
53. `groups` — Check karna ke aapka user kin-kin groups ka member hai.
54. `w` — System par logged in active users aur unki activities dekhna.
55. `who` — Konsa user kis terminal se login hai wo dekhna.
56. `last` — Server par hone wale sabhi recent logins ki history check karna.

Act 5: Neutralizing Malicious Processes (Process Control)

57. `ps` — Current user ke chalne wale active processes ki list.
58. `ps aux` — System par background me chalne wale TAMAM processes dekhna.
59. `top` — Real-time CPU aur RAM usage aur processes ki live dashboard.
60. `htop` — Interactive aur colorful process manager.
61. `kill` — Bad process ko uske PID (Process ID) se band karna.
62. `killall` — Program ke naam se tamam associated processes kill karna.
63. `pkill` — Pattern ke hisab se process signal bhej kar stop karna.
64. `nice` — Naye process ko high ya low priority ke sath start karna.
65. `renice` — Pehle se chal rahe process ki priority change karna.
66. `bg` — Paused task ko background me resume karna.
67. `fg` — Background me chal rahe task ko screen par (foreground) lana.
68. `jobs` — Shell session me background tasks ki list dekhna.

Act 6: Searching for Malware & Backdoors (Pattern Finding)

69. `find` — Hard drive par specific name, size, ya date se file search karna.
70. `locate` — Database index se instant file find karna.
71. `grep` — Files ke andar specific text ya word dhoondna.
72. `grep -r` — Poore directory folder me recursively word search karna.
73. `awk` — Logs me se specific columns filter aur print karna.

74. `sed` — File me text replacement ya line deletion automate karna.
75. `sort` — Text data ko alphabetically ya numerically arrange karna.
76. `uniq` — Duplicate lines ko remove karke unique lines dikhana.
77. `cut` — Text lines me se specific sections/delimiters kaat kar nikalna.
78. `tr` — Characters ko translate (e.g., lowercase to uppercase) ya delete karna.
79. `tee` — Command output ko screen par bhi dikhana aur file me save bhi karna.
80. `alias` — Lambi commands ka chota shortcut keyword banana.

Act 7: Network Traffic & Connections Analysis (Network Investigation)

81. `ping` — IP ya domain se connectivity test karna.
82. `ip a` — Server ke sabhi network interfaces aur unke IPs dekhna.
83. `ifconfig` — Network interface IP setup check karna (legacy command).
84. `netstat` — Server par open ports aur listening connections ki list.
85. `ss` — Faster tool to inspect open network ports and socket statistics.
86. `traceroute` — Target IP tak jaane wale routers ka rasta (hops) track karna.
87. `nslookup` — Domain Name ka IP address pata karna.
88. `dig` — Advanced DNS queries aur records search karna.
89. `wget` — Web se direct link ke zariye files download karna.
90. `curl` — Web server se API responses ya web pages fetch karna.
91. `scp` — Network par SSH ke zariye securely file transfer karna.
92. `ssh` — Remote server me encrypted secure terminal access lena.
93. `rsync` — Remote location par fast and incremental file backup karna.

Act 8: Storage, Disks & Backup (System Health Check)

94. `df -h` — Disk partition me bachi hui jagah (GBs me) check karna.
95. `du -sh` — Kisi specific folder ka total storage size check karna.
96. `lsblk` — Attached Hard drives aur unki partitions ki tree view.
97. `fdisk -l` — Detailed partition tables list aur disk sizes dekhna.
98. `mount` — External drive ya partition ko file system se connect karna.
99. `umount` — Drive ko safely disconnect karna.
100. `tar -cvf` — Multiple files/folders ka compressed archive (.tar) banana.
101. `tar -xvf` — Tar archive file ko uncompress/extract karna.
102. `zip` — Files ko standard zip format me compress karna.
103. `unzip` — Compressed zip file ko extract karna.
104. `gzip` — Single file ko `.gz` format me high-compression dena.
105. `gunzip` — `.gz` file ko decompress karna.

Act 9: Services Management & Server Cleanup (Restoration)

106. `systemctl start` — Web server ya background service ko start karna.
107. `systemctl stop` — Rogue ya unused service ko band karna.
108. `systemctl status` — Service ki health aur running state check karna.
109. `systemctl restart` — Configuration update ke baad service restart karna.

110. `systemctl enable` — Service ko system boot hote hi automatic run hone par set karna.
111. `crontab -e` — Scheduled recurring background tasks (cron jobs) setup karna.
112. `dmesg` — Kernel boot aur hardware error logs inspection karna.
113. `free -m` — Total RAM, used RAM, aur swap space (MBs me) dekhna.
114. `reboot` — Mission complete hone par server ko restart karna.
115. `shutdown -h now` — Emergency me server ko turant power off karna.
